LOGO & PHOTO REQUIREMENTS

Electronic logo artwork created in a Vector Program (ex. Adobe Illustrator) is the preferred file type. All fonts should be converted into outlines and saved as an EPS file. PDF's are acceptable if originally built as vector art. Please include any fonts with the artwork.

For photographs, TIFF or JPG files will work. The resolution on these files must be 300 dpi or more with the image size at least 4"x6".

We understand that everyone does not have access to these files. If you are unsure if your logo or photo file will work, be sure to email us the file as an attachment and we can take a look and do our best to make your artwork work. A DST file will not work as it is used for embroidery purposes only.
